

# Heater with regulation GR for boilers/water tanks - catalogue sheet

Electric heater GR is a model with water temperature control designed for boiler and water tanks, also working in solar systems. It can be installed also in stainless steel tanks.

### Advantages:

- water temperature control (10-65°C)
- mechanical thermostat Cotherm
- brass flange for easy installation in a tank
- protection against heating element damage (overheating) -
- manual multiple fuse (easy manual reset)

### **Technical data:**

- working environment water
- voltage 230V 50Hz
- electrical connection straight cable with a plug
- flanges available: 5/4" and 6/4"
- available outputs: 1500W, 2000W and 3000W

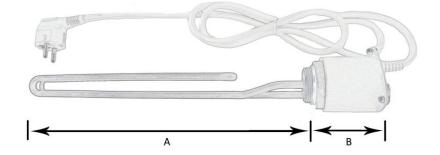

# Material characteristics:

casing pipe – stainless steel 1.4404  $\Phi$ 8,5; brass flange; insulator - magnesium oxide (MgO); spiral – Kanthal wire; temperature regulator – mechanical (Cotherm)

# Lenght of heating element (A):

1500W - 335 mm (straight element) 2000W - 390 mm (straigth element) 3000W - 370 mm (bent element)

Lenght of casing (B): 70mm Cable lenght: 1200mm
